

USER'S MANUAL

GOBLIN-PLUS

Electrical Load Manager/Demand Controller

This document contains the latest technical information about GOBLIN-PLUS which is a micro-controller based Electrical Load Management/Demand Controller. The product GOBLIN-PLUS is sophisticated electronic equipment, and the user is advised to read this User's Manual carefully before attempting to install or operate the equipment.

Trinity Energy Systems Pvt. Ltd.

Published on: 19/08/2020
Document Version: 1.0

Warranty statement

Trinity warrants to the original retail purchaser of the Trinity product enclosed with this limited warranty statement that the product, if purchased new and used in the India conforms to the manufacturer's specifications and will be free from defects in workmanship and materials for a period of one year from the date of original purchase, unless expressly stated otherwise by Trinity, in a written format.

Should your Trinity product prove defective during the warranty period, please bring the product securely packaged in its original container or an equivalent, along with proof of the date of original purchase, to our Trinity Dealer or Factory. You are responsible for all costs (shipping, insurance, travel time) in getting the product to the service location. Trinity will, at its option, repair or replace on an exchange basis the defective unit, without charge for parts or labor. When warranty service involves the exchange of the product or of a part, the item replaced becomes Trinity property. The replacement unit may be new or refurbished to the Trinity standard of quality, and at Trinity's option, the replacement may be another model of like kind and quality. Trinity's liability for replacement of the covered product will not exceed the original retail selling price of the covered product. Exchange or replacement products or parts assume the remaining warranty period of the product covered by this limited warranty.

What This Warranty Does Not Cover:

This warranty does not apply to refurbished or reconditioned products. This warranty covers only normal use in India. This warranty does not cover damage to the Trinity product caused by parts or supplies not manufactured, distributed or certified by Trinity. This warranty is not transferable. This warranty does not cover third party parts, components or peripheral devices added to the Trinity product after its shipment from Trinity. Trinity is not responsible for warranty service should the Trinity label or logo or the rating label or serial number be removed or should the product fail to be properly maintained or fail to function properly as a result of misuse, abuse, improper installation, neglect, improper shipping, damage caused by disasters such as fire, flood, and lightning, improper electrical current, interaction with non-Trinity products, or service other than by an Trinity Authorized Service.

The warranty and remedy provided above are exclusive and in lieu of all other express or implied warranties including, but not limited to, the implied warranties of merchantability or fitness for a particular purpose. In the event, the remedies above fail, Trinity's entire liability shall be limited to a refund of the price paid for the Trinity product covered by this limited warranty. Except as provided in this written warranty, neither Trinity Energy Systems Pvt. Ltd. nor its affiliates shall be liable for any loss, inconvenience, or damage, including direct, special, incidental, or consequential damages, resulting from the use or inability to use the Trinity product, whether resulting from breach of warranty or any other legal theory.

Introduction

The digital power meter, GOBLIN-PLUS is a micro-controller based unit which measures various electrical parameters, and sequentially displays on a 480 x 272 (RGB) smart TFT display (Touch), but also acts as a comprehensive load managing device due to its four numbers of output relay contacts. These outputs are individually field programmable for both the parameter on which to generate alarm as well as the values on which to activate alarm and deactivate it. The meter has four LEDs in the front, two to calibrate energies, one to indicate the status of RS485 communication and one to indicate DG Status.

The unit is meant for use in three phase four wire/ three wire and single phase two wire systems. In three phase four wire LT systems, it requires four wires from R, Y, B & N, in addition to six wires from the three current transformers mounted on the three phases. It thus uses the three wattmeter method to arrive at the system KVA and KW. On the other hand, for use in three phase three wire system, it requires three phases from the PT secondary (usually 110 VAC) and only four wires from the HT current transformer secondary of two phases. The KVA and KW are calculated by the two wattmeter method. In single phase two wire LT systems, it requires two wires from R & N, in addition to two wires from the single current transformers mounted on the single phase. It thus uses the single wattmeter method to arrive at the system KVA and KW.

The unit measures the three phase voltages, currents and individual power factors, KW, KVA, KVAR and THD for voltage and Current for all three phases. Based on these inputs, the system KVA, KW and KVA_r can also be calculated. Unit also measure System KWh (Import, Export, Net and DG), KVAh (Import, Export, Net and DG), and KVARh (Import, Export, Net and DG).

For the correct operation of the unit, the only basic care required is to ensure that the phase sequence of the three phases is R-Y-B and the polarity of the CT secondary is correct. The S1 terminal in every CT will go to the M terminal of unit. Similarly, the S2 end of the CT will go to the L terminal of the unit.

For Power Quality Analysis – GOBLIN-PLUS measures individual harmonics for all voltage and current waveforms, both even and odd, up to the 30th order, with THD as per IEC 61557-12. It also records in its non-volatile memory with date and time stamp, 180 Interruption events and 180 SAG/SWELL events, as per IEC 61000-4-30 standard.

GOBLIN-PLUS Measure Present Demand, Predicted Demand for KW, KVA, KVAR and Average Amp. GOBLIN-PLUS separately measure Import and Export demand for KW, KVA and KVAR, also measure Maximum Demand and Last Maximum Demand with Date and Time which is available on the Display Page & RS485.

GOBLIN-PLUS Measures Time zone wise KWh, KW & KVA Demand (Import, Export). Number of Time zone parameter is user selectable two to five & zero.

The unit is fully solid state and will give years of trouble-free service once installed correctly.

The Main features Available in this Model

- All readings are true RMS measurements
- Site selectable 1A or 5A CT secondary & Neutral CT secondary
- CT Primary, PT Primary and PT Secondary are site selectable
- Three phase current, Phase to Neutral and Phase to Phase Voltages.
- Measurement of all individual Power parameter as well as System parameter.
- Measurement of all System Energy Parameters for both EB (Import, Export) and DG.
- *Measure Net Energy for the all system Energy Parameters.
- Measurement of system PF including individual PF in three phases at lead and lag side
- Phase Wise Distortion and Displacement PF.
- Demand Measurement: Fixed or Sling for KW, KVA, KVAR and IAVG.
- *Individual Harmonics up to 30th for voltage and current.
- Voltage and current THD.
- Measures Neutral current.
- *Voltage Phase Angle (Angle between Vr - Vy, Vy - Vb and Vr - Vb).
- *Current Phase Angle (Angle between Ir - Iy, Iy - Ib and Ir - Ib).
- *Phase Angle between Voltage and Current (Vr – Ir, Vy – Iy and Vb – Ib,)
- Voltages unbalance percentage (%VR, %VY, %VB).
- Current unbalance percentage (%IR, %IY, %IB).
- ON Hour and Run Hour (Import, Export, DG).
- *Interruption Date and Time for 180 Events.
- *Sag and Swell Value, Date and Time for 180 Events.
- *Min – Max Data with Date and Time.
- Real Time - Date and Time.
- Energy Pulse Output on the LED.
- RS-485 port for connection to SCADA/EMS. RS-485 communication indication RX/TX LED.

Note: * indicate these parameters only available on the RS485.

Technical Specifications

Parameters			
Type	Name	Statistics	
INPUT	Supply	Three Phases and Neutral of a 3P4W system / Three Phases of a 3P3W system / Single Phase and Neutral of a 1P2W System	
	Voltage	Direct Voltage Input : up to 500V L-L, 300V L-N PT Ratio : Site Selectable Burden : 0.5VA	
	Current	Secondary Current Input : 5A or 1A (Site Selectable) CT Primary : Site Selectable Range of Reading : up to 8000A Burden : < 1.0VA Overload : 5A CT → 6A RMS Continuous : 1A CT → 1.2A RMS Continuous	
	Power Supply	Auxiliary Supply : 80 - 270 VAC/DC, 50-60 Hz.	
MEASUREMENT	True RMS Basic Parameters	Voltage (Volts L-N & L-L)	Accuracy : 0.5% of Reading

		Apparent Power (S)	Accuracy : 0.5% of Reading
		Power Factor	For Individual phases and System PF Accuracy : 0.5% of Reading (IPFI≥0.5) Range of Reading : 0.05 to 1.00 Lag/Lead
	Energy	Total Active Energy (KWh)	Range of Reading : 0 to 999999999.9 Accuracy : class 0.5s as per IS14697
		Total Apparent Energy (KVAh)	Range of Reading : 0 to 999999999.9 Accuracy : 0.5% of Reading
		Total Reactive Energy (KVARh)	Range of Reading : 0 to 999999999.9 Accuracy : 1.0% of Reading
	Power Quality	THD and Individual Harmonic For each Phase V and A	Class 5.0 as per IEC 61557-12 up to 30 th order.
	Demand	Parameters	KW, KVA, KVAR and Avg.Amps.
		Window	15 minutes or 30 minutes selectable.
		Mode	Fixed or Sliding selectable.
Calculation		Present, Predicted, Maximum Demand and Last Maximum Demand (Import & Export – For Power Parameter Only)	
MISCELLANEOUS	Dimensions	Bezel	144 X 144 mm
		Panel Cutout	138 X 138 mm
		Depth of installation	55 mm
		Display	Smart Touch TFT (480x272 RGB)

	Operating temp	0°C to 55°C
	Weight	0.64 Kgs (Approx.)
	Operating Current Range	0.4% to 120% of CT primary
Communication	RS485 Port	Connection : Two Wire Isolation : 2.5KV RMS Protocol : Modbus-RTU Baudrate : 9600, 19200, 38400 Parity : None Stop bit : 1
	Data Logging Buffer	16 MB, Non-Volatile memory, can hold 35172 records
	Logging Duration	Site selectable from 1 minute to 60 minutes
	USB Pen Drive	For downloading logged data
Display update	Instantaneous	1 S
	Demand	1 S
	Harmonics	3 S
	Calibration LED.	Red color. 1000 impulses/unit.
	Communication LED	Dual color LED. Data Receive – Green LED. Data Transmit – Red LED.
	DG LED	Red color LED DG ON – LED ON DG OFF – LED OFF
* 0.5s accuracy applicable only in 3P4W mode.		

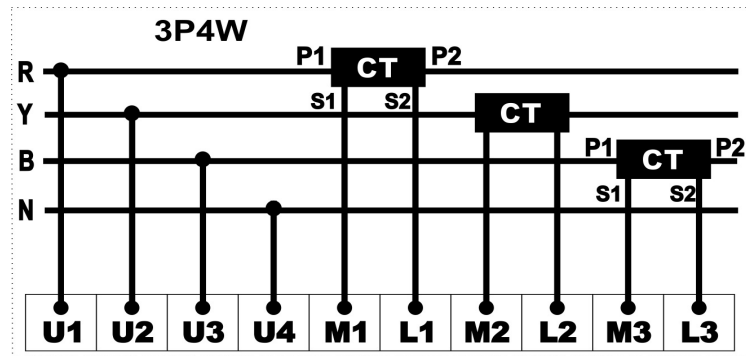

Installation and Commissioning

The unit supports 3P4W type of electrical installation.

3P4W Mode Installation

For Installation and Commissioning, proceed the following instructions.

1. Push the unit into the panel and mount it by using the clamps provided. Connect the Auxiliary supply (80 VAC/DC to 270 VAC/DC) to the terminals marked P and N.

2. Connect the three phases with the phase sequence being R-Y-B to the terminals marked U1, U2 and U3 respectively. Make sure that the three

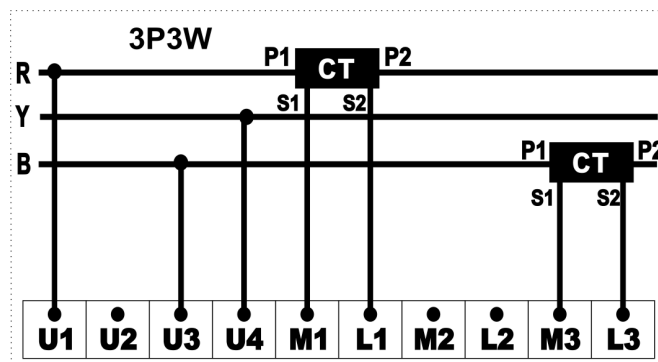

phases coming to the unit come through control fuses of 1.0 Amp rating. This will protect the electronic inside from damage due to severe over voltages or phase faults in the system.

3. Connect the neutral wire to the terminal marked U4.
4. Connect the two wires from the R-Phase CT to the terminals marked M1 and L1 such that S1 from CT goes to M1 on the unit. Connect the two wires from the Y-phase CT to the terminals marked M2 & L2 such that S1 from the Y-phase CT goes to M2 on the unit. Connect the two wires from the B-phase CT to the terminals marked M3 & L3 such that S1 from CT goes to M3 on the unit.
5. Switch on the three phases supply as well as the auxiliary supply. The unit will come alive and display power up information such as CTR (CT Ratio), PTR (PT Ratio) and Address (Device ID), Installation and then, the unit enters into Run Mode displaying the first page (main menu).
6. The unit should be programmed for all the required parameters which are field programmable and therefore, for selecting the various options supported, refer Operational Details in next section.
7. Now, the unit is ready for operation.

3P3W Mode Installation

For Installation and Commissioning, proceed the following instructions.

1. Push the unit into the panel and mount using the clamps provided. Connect the auxiliary supply (80 VAC/DC to 270 VAC/DC) to the terminal marked P and N.

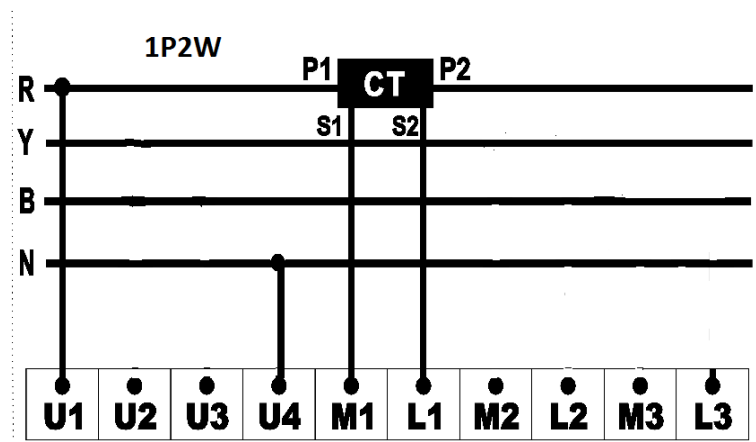

2. Connect the three phases such as R-phase to the terminal marked U1, Y-phase to the terminal marked U4 and B-phase to the terminal marked U3 respectively. Make sure that the three phases coming to the unit come through control fuse of 1.0 Amp rating.

3. Connect the two wires from R-phase CT to the terminal marked M1 & L1 such that S1 from CT goes to M1. Connect the two wires from B-phase CT to the terminal marked M3 & L3 such that S1 from the CT goes to M3 on the unit.
4. Switch on the three phases supply as well as the auxiliary supply. The unit will come alive and display power up information such as CTR (CT Ratio), PTR (PT Ratio) and Address (Device ID), Installation and then, the unit enters into Run Mode displaying the first page (main menu).
5. The unit should be programmed for all the required parameters which are field programmable and therefore, for selecting the various options supported, refer Operational Details in next section.
6. Now, the unit is ready for operation.

1P2W Mode Installation

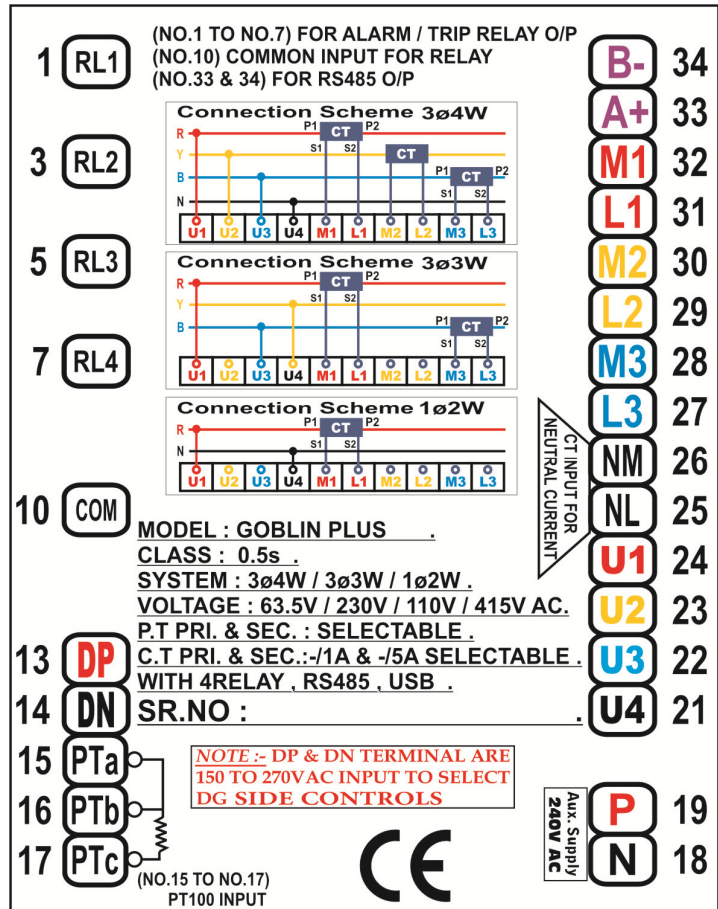

For Installation and Commissioning, proceed the following instructions.

1. Push the unit into the panel and mount using the clamps provided. Connect the auxiliary (80 VAC/DC to 270 VAC/DC) to the terminal marked P and N.

2. Connect the single phase with the phase sequence being R to the terminals marked U1. Make sure that the phase coming to the unit come through control fuses of 1.0 Amp rating. This will protect the electronic inside from damage due to severe over voltages or phase faults in the system.
3. Connect the neutral wire to the terminal marked U4.
4. Connect the two wires from the R-Phase CT to the terminals marked M1 and L1 such that S1 from CT goes to M1 on the unit.
5. Switch on the single phase supply as well as the auxiliary supply. The unit will come alive and display power up information such as CTR (CT Ratio), PTR (PT Ratio) and Address (Device ID), Installation and then, the unit enters into Run Mode displaying the first page (main menu).

6. The unit should be programmed for all the required parameters which are field programmable and therefore, for selecting the various options supported, refer Operational Details in next section.
7. Now, the unit is ready for operation.

AUX. Supply – (80 to 270 VAC/DC)

Connection Scheme

Operational Details

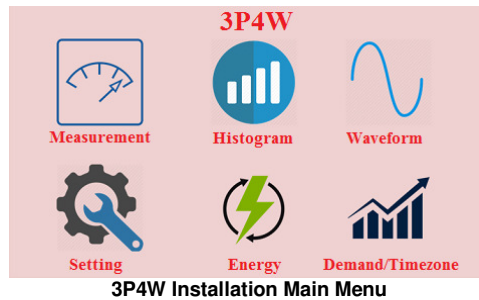

The electrical load manager, GOBLIN-PLUS is a versatile meter with all the features needed to implement for a robust electrical power system.

The unit has three types of modes such as

1. Programming Mode
2. Programming Mode using Utility
3. Run Mode.

For programming mode using utility, refer in latter section “Communication”.

After supplying power (80 VAC/DC to 270 VAC/DC), the unit displays immediately at power up Product name, Factory name-Location then it shows information such as CTR (CT Ratio), PTR (PT Ratio), and ADDRESS (Device ID), Installation and unit enters into Run Mode displaying the first main menu page by default such as shown below. Installation mode shows in top of the main menu page.

Now, the unit can be operated by touching on any of the icon. Touching the icon shows color changes at that area.

Programming Mode

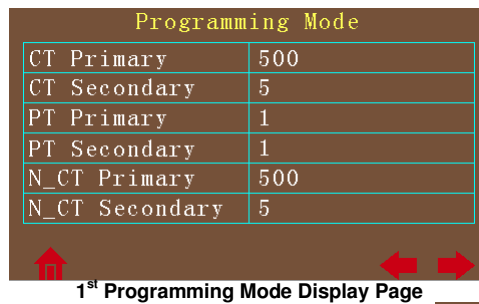

The unit can be programmed by touch the setting icon  in the main menu page. If on entering the programming mode, no touch applied for one minute the unit will automatically revert to Run Mode.

GOBLIN-PLUS parameters are password protected so before entering in the programming mode user need to set PASSWORD. In Run Mode touch setting icon and unit will prompt Password page such as shown below. To exit from the password page touch on the  Home icon.

The unit is designed with a secure default password “1947”. The password is also changeable from 0 to 9999 (see in the next section, programmable parameter “change password”). To enter the password, touch **0000** and it shows numeric keyboard, after entering password press **OK** button. If correct password entered then it will enter into Programming mode and 1st Programming mode display page appear. If entered password wrong then it shows Wrong Password Entered information and enter password page appear again. Total of seven programming pages are there, first programming mode display page shown below.

1st Page programming mode Parameters:

1st Programming Mode Display Page

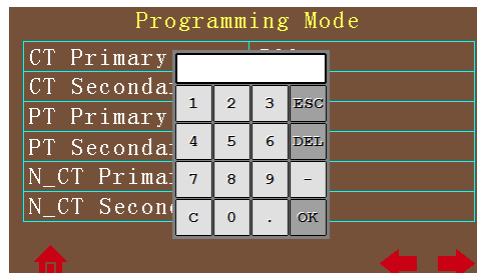

Exit From programming mode touch on HOME key Icon  and unit will reset if any parameter changed. To change programming mode pages touch  or  icons.

Setting CT Primary

CT Primary should be selected at site so as to give the actual current for CT operated meters. The CT Primary can be selected from 5 to 8000.

To retrieve the CT Primary, precede the following instructions.

1. In programming mode touch on **CT Primary** parameters, After touching CT Primary value numeric keyboard appear to enter value.

Keyboard functionality

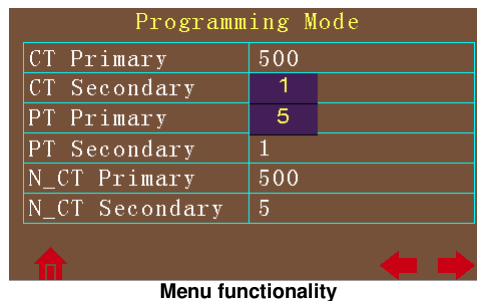

2. Now enter **CT Primary** value and press **OK** button to save the parameter.
3. After successful setting CT Primary value it appears on the display and user can configure next programmable parameter.

Selecting CT Secondary

CT Secondary should be selected at site so as to give the actual current for CT operated meters. CT Secondary can be selected to either 1 or 5.

To retrieve the CT Secondary, precede the following instructions.

1. To program CT Secondary touch on CT Secondary value and menu appear as two options 1 & 5 such as shown below.

2. Now touch any of them option **1 or 5** and save the configuration.

Setting PT Primary

PT Primary should be selected at site so as to give the actual voltage in your PT operated meters. The PT Primary can be selected from 1 to 999999.

To Program Touch on PT Primary value, enter value in keyboard and press OK to save.

Setting PT Secondary

PT Secondary should be selected at site so as to give the actual voltage in your PT operated meters. The PT Secondary can be selected from 1 to 999.

To Program Touch on PT Secondary value, enter value in keyboard and press OK to save.

Setting Neutral CT Primary

Neutral CT Primary is settable from 5 to 8000. To measure actual Neutral current, both Neutral CT Primary (N_CT Primary) and CT Secondary (N_CT Secondary) should be set.

To Program Touch on N_CT Primary value, enter value in keyboard and press OK to save.

Selecting Neutral CT Secondary

Neutral CT Secondary is selectable to either 1 or 5.

To Program Touch on N_CT Secondary value and menu appear as two options 1 & 5, Now touch any of them option **1 or 5** and save the configuration.

2nd Page programming mode Parameters:

Programming Mode	
Installation	3P4W
LOG Duration	60 Min.
RTC Date	23/07/2020
RTC Time	23:59:59
BAUD Rate	9600
Device ID	1

2nd Programming Mode Display Page

Selecting Installation type

The unit supports 3 types of electrical installation: 3P4W, 3P3W and 1P2W. According to your electrical installation, user should select to either 3P4W or 3P3W or 1P2W.

To select the installation type, precede the following instructions.

1. To program touch on installation type & it shows menu as below.

1P2W
3P3W
3P4W

2. Now touch on any of three installation mode to select and save.

Setting Log Duration

For logging the parameters, the Log duration can be specified from 1 to 60 minutes. GOBLIN-PLUS has the capability to log data on its own Non-volatile RAM. This data is logged in FIFO buffer. Once the buffer (35172 Records) is full, the oldest data is discarded and the newest data is filled into the buffer. This data can then be downloaded by using a software utility provided by Trinity, to a PC or through Pendrive, record by record. To program this parameter touch on log duration enter value in keyboard and press OK to save.

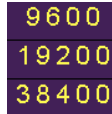

Setting RTC Date & Time

User can program Date, Month, Year, Hour, Minute, Second individually by touching on that parameter then enter value in keyboard and press **OK** to save.

Hour should be set as 24 hour. This real time will also reflect into data logging which can be observed after downloading logged data.

Selecting Baud Rate

In case of RS485 connection, the Baud rate is settable to either 9600 or 19200 or 38400 for its communication. Touch on Baud rate value and it appears menu for three options 9600, 19200, 38400 as shown below.

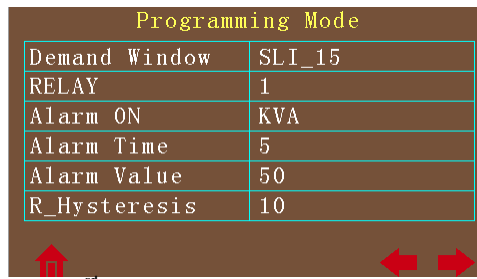

Now touch on any baud rate that you want to select and save.

Setting Device id

Device id settable from 1 to 255, to program this parameter touch on log duration enters value in keyboard and press OK to save.

3rd Page programming mode Parameters:

3rd Programming Mode Display Page

Selecting Demand Window

The unit supports 2 types of demand window for the calculation of the demand such as Fixed Window or Sliding Window. For each window user can select either 15 Minute or 30 Minute Interval. As per the Demand Window, GOBLIN-PLUS calculates Demand Value for KW, KVA, KVAR and IAVG.

To select the Demand Window, precede the following instructions.

1. Touch on SLI_15 to select Fix or Sliding window demand with 15 or 30 min Interval duration from menu as shown below. Touch on any of 4 options to save the demand type.

SLI_15	FIX_15	Fixed Window 15 Minute Interval
SLI_30	FIX_30	Fixed Window 30 Minute Interval
FIX_15	SLI_15	Sliding Window 15 Minute Interval
FIX_30	SLI_30	Sliding Window 30 Minute Interval

Selecting Relays, Time (Alarm Delay), Alarm Parameters, Alarm Values and Hysteresis

The meter has four relays for an alarm contacts. The relay contact is rated 3A @ 230 VAC. The contact is normally open where the operation of the relay contact can be programmable at site. For this specification, there are four parameters to be programmed such as shown below:

- a. Select **Relay number** to set alarm parameter, time, value & hysteresis. Relay number programmable from 1 to 4.
- b. The **Alarm Parameter (Alarm ON)** for which the alarm has to be generated should be selected from any one of the following: Avg. Volt, Avg. Amps, KVA, KW, KVAR, PF, KW Demand, KVA Demand, KVAR Demand and Avg.Amps Demand. In case, user is not desired for alarm, the Alarm should be set to NONE.
- b. The **Alarm Values (Alarm Value)** which is programmable from 1 to 10000. In case of Avg. Volts the parameter is freely programmable from 1 to 70000 should be selected for which the alarm has to be generated. In case of PF the Alarm value can be set from 500 to 1000, in case of Temperature the Alarm value can be set from 1 to 75.
- c. The **Time Delay (Alarm Time)** for a selected alarm parameter should be also set from 5 seconds to 180 seconds. In case of Demand Parameters, it will be fix 2 seconds.

Understanding Alarm parameter Hysteresis

There is a time delay involved in switching ON and OFF the relay. Also, if there is no hysteresis in the switching operation of the relay, there is bound to be frequent switching of the relay near the alarm value. To avoid this, a band of 5 % is added to the programmed value, which acts when the time to switch off the relay comes .e.g. Say, the parameter is set to KW; the value for operating the relay is programmed to 100 and the time delay is set to 30 seconds. The relay will, thus operate when the KW crosses 100, **and stays more than 100 for 30 seconds continuously.**

The relay will now open when the KW falls below 95, **and stays that way for 30 seconds continuously.**

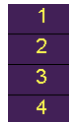

Thus, there is a time delay involved, and also a 5% band. However, since Demand is already an integrated parameter, there is only 2 seconds delay involved when the alarm contact is set for KW Demand/KVA Demand/KVAR Demand/Avg.Amps Demand.

All this is summarized below:

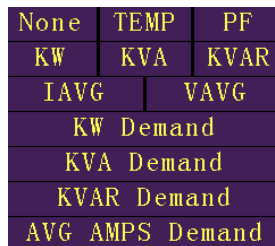

Sr. No.	Alarm parameter	Relay switches on at	Relay switches off at	Settable Time Delay
1.	Avg. Volts	>Set value	<95 % of set value	005 to 180 sec.
2.	Avg. Amps.	>Set value	<95 % of set value	005 to 180 sec.
3.	KVA	>Set value	<95 % of set value	005 to 180 sec.
4.	KW	>Set value	<95 % of set value	005 to 180 sec.
5.	KVAR	>Set value	<95 % of set value	005 to 180 sec.
6.	KW Demand	>Set value	<95 % of set value	2 sec.(fixed)
7.	KVA Demand	>Set value	<95 % of set value	2 sec.(fixed)
8.	KVAR Demand	>Set value	<95 % of set value	2 sec.(fixed)
9.	Avg.Amps Demand	>Set value	<95 % of set value	2 sec.(fixed)
10.	Temperature	>Set value	<95 % of set value	005 to 180 sec.
11.	PF	<Set value	>Set value	005 to 180 sec.
12.	None	-	-	-

To retrieve the Alarm On, Alarm Time, Alarm value and precede the following instructions.

1. To configure relay 1 parameters, touch on Relay and select 1 among 1, 2, 3, 4 options as shown below menu.

2. After selecting Relay number Touch on Relay ON parameters, it shows menu for selection of different parameters as shows below. Touch & select to save the parameter.

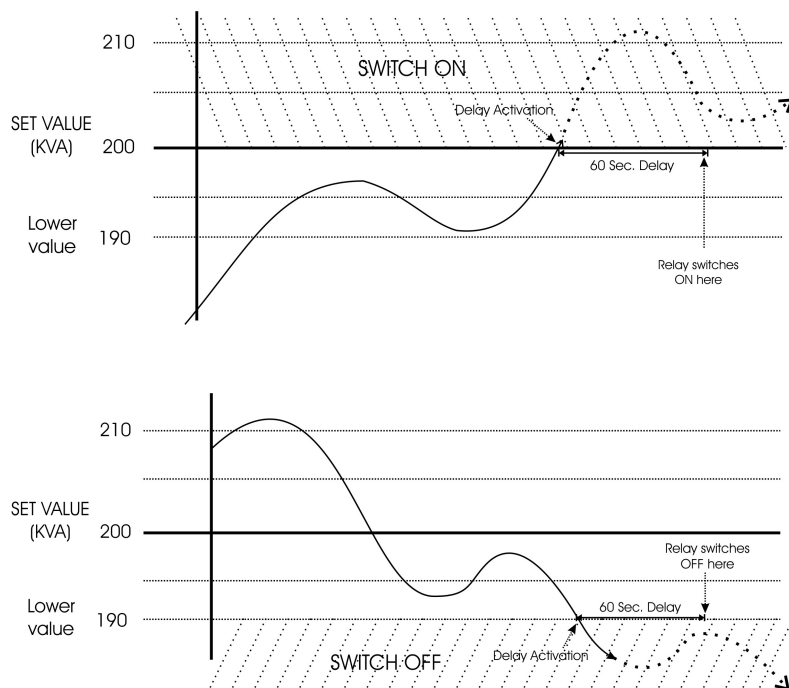

3. For program time delay touch on Relay time and enter value Between 5 to 180 second to save the parameter. For Demand Parameters this value fix to 2 second.
4. Now touch on Alarm value, Enter value and press OK to save the value.
5. To program Relay hysteresis percentage, touch enters value and press OK to save.
6. To configure Relay 2, 3 or 4 Parameters select relay number & proceed as above.

Relays For Alarm Action

In order to program alarm parameters for relays, user can select any one of the following parameters: Avg. Volt $[(V_{ry}+V_{yb}+V_{br})/3]$, Avg. Amps $[(I_r+I_y+I_b)/3]$, KVA, KW, KVAR, KW Demand, KVA Demand, KVAR Demand, AvgAMPs Demand, PF and temperature.

For example, in case of Alarm Relay 1, the parameter is set to KVA; the value for operating the relay is programmed to 200 and the time delay is set to 60 seconds. The relay will, thus operate when the KVA crosses 200, and stays more than 200 for 60 seconds continuously. The relay will now open when the KVA falls below 190, and stays for 60 seconds continuously. That is why a band (hysteresis) of 5% is added to the programmed value.

In case of PF, the hysteresis is not applicable and the operation is also reversed. It has a multiplying factor (MF) of 1000. Thus, a PF value of 0.98 is set as 980. Thus, when the PF value falls below 980, the relay will wait for 120 seconds and then close the switch. However, the relay will open when PF crosses 98 with the specified delay.

4th Page programming mode Parameters:

Programming Mode	
Change Password	* * * *
Event	1
Event ON	KW
Event Time	42
Event Value	200
E_Hysteresis	15

4th Programming Mode Display Page

Setting Password

To set programming password, touch on * * * * then enter the password (0 to 9999) and press OK to save. Entered password will show in RED color for 4 seconds and then after * * * * string appear in white color.

Selecting Events, Time (Event Delay), Event Parameters, Event Values and Hysteresis

There are four types of Event which can be logged for user defined event parameters. Programming event parameters are also same as Alarm parameters defined before.

5th Page programming mode Parameters:

Programming Mode	
Nominal Voltage	250
SAG %	90
SWELL %	140
Interruption %	50
Hysteresis %	5
Back Light CTRL	59

5th Programming Mode Display Page

Setting Nominal Voltage

For the Power Quality Functionality Detection user need to specifies the Nominal RMS Voltage to GOBLIN-PLUS. User can be set Nominal Value up to 140000. To program this parameter touch on nominal voltage value, Enter value in keyboard & press **OK** to save.

Setting SAG Threshold Percentage

GOBLIN-PLUS Consider Sag Threshold as a Percentage of the Nominal Voltage. GOBLIN-PLUS starts measuring Sag Event below this Threshold. GOBLIN-PLUS log Sag Value, Date & Time and duration. SAG Threshold can be set between 10% to 90%. To program touch on SAG Threshold %, Enter value in keyboard & press **OK** to save.

Setting SWELL Threshold Percentage

GOBLIN-PLUS Consider Swell Threshold as a Percentage of the Nominal Voltage. GOBLIN-PLUS starts measuring Swell Event above this Threshold. GOBLIN-PLUS log Swell Value, Date & Time and duration. SWELL Threshold can be set between 110% to 300%.

To program touch on SWELL Threshold %, Enter value in keyboard & press **OK** to save.

Setting INTERRUPTION Threshold Percentage

GOBLIN-PLUS consider Interruption threshold as a Percentage of the Nominal Voltage. GOBLIN-PLUS starts measuring Interruption Event below this Threshold. GOBLIN-PLUS log Start Time and Duration of Interruption Event. INTERRUPTION Threshold can be set between 5% to 10%.

To program touch on Interruption Threshold %, Enter value in keyboard & press **OK** to save.

Setting Hysteresis Percentage

Hysteresis is the difference in magnitude between SAG/SWELL/INTERRUPTION Start Threshold and the threshold for the SAG/SWELL/INTERRUPTION Event consider as completed. Hysteresis Value can be set between 2% to 50%.

Note: After Power Up, all phases voltage should be stable (above the Sag threshold and below the Swell Threshold) to start Sag/Swell/Interruption event login.

Example: If Hysteresis set is 2% and SAG Threshold is 90% then GOBLIN-PLUS start measuring Sag Event below the 90% of the nominal Voltage and Sag Event End when Voltage level reach above 92% of the nominal voltage. If Hysteresis set is 2% and SWELL Threshold is 110% then GOBLIN-PLUS start measuring Swell Event above the 110% of the nominal voltage and Swell Event end when Voltage level reach below 108% of the nominal voltage. If Hysteresis set is 2% and Interruption Threshold is 5% then GOBLIN-PLUS start measuring Interruption Event below the 5% of the nominal voltage and Interruption Event end when Voltage level reach above 7% of the nominal voltage.

SAG Event: Suppose Nominal Value is 240V, SAG Threshold is 90% and Hysteresis is 2%. SAG Event start when one of the Phase Voltage goes below the 216V (90%(SAG) of VNOM) and SAG Event Completed when all phase voltage goes above the 220.8V (92%(SAG + HYSTERESIS) of VNOM). GOBLIN-PLUS log Start Time Stamp of SAG Event and Time Duration between SAG Event Start and End. GOBLIN-PLUS also log minimum Voltage SAG value during SAG duration.

SWELL Event: Suppose Nominal Value is 240V, SWELL Threshold is 110% and Hysteresis is 2%. SWELL Event start when one of the Phase Voltage goes above the 264V (110% (SWELL) of VNOM) and SWELL Event Completed when all phase voltage goes below the 259.2V (108% (SWELL- HYSTERESIS) of VNOM).GOBLIN-PLUS log Start Time Stamp of SWELL Event and Time Duration between SWELL Event Start and End. GOBLIN-PLUS also log maximum Voltage SWELL value

during SWELL duration.

INTERRUPTION Event: Suppose Nominal Value is 240V, INTERRUPTION Threshold is 5% and Hysteresis is 2%. INTERRUPTION Event start when all Phase Voltage goes below the 12V (5% (INTERRUPTION) of VNOM) and INTERRUPTION Event Completed when one of the phase voltage goes above the 16.8V (7% (INTERRUPTION + HYSTERESIS) of VNOM).GOBLIN-PLUS log Start Time Stamp of INTERRUPTION Event and Time Duration between INTERRUPTION Event Start and End.

GOBLIN-PLUS log Duration in milliseconds for Sag/Swell/Interruption Event. If event continue for more than 60 seconds then GOBLIN-PLUS log it as 60000 milliseconds.

To program touch on Hysteresis %, Enter value in keyboard & press OK to save.

Setting Back light control

To enhance the life of TFT backlight, there is provision to switch off TFT backlight after programmed time interval. This time can be programmed through this parameter. By default back light control setting is 60 seconds (After 60 seconds TFT back light OFF & turns ON at touch event). Minimum duration is 5 Sec & Maximum duration is 300 Sec (5 Min) of Back light. For program touch on back light CTRL, enter value and press OK to save.

6th Page programming mode Parameters:

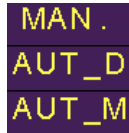

Programming Mode	
Reset Demand	MAN.
Reset Energy	NO
Reset Min-Max	NO
Reset Logs	NO
Reset MaxDmd	NO
Reset Event	NO

6th Programming Mode Display Page

Resetting Demand

Reset Demand can be specified such as whether the demand will be reset automatically or manually. In case of automatic reset, there are two options: auto_day(**AUT_D**) or auto_month(**AUT_M**). If user selects auto_day then DEMAND will reset every 24 hrs at 12:00 a.m. and if user selects auto_month then DEMAND will reset on 1st of every month at 12:00 a.m. Otherwise, RESET DEMAND should be set to MAN., to reset manually(**MAN.**).

To program Reset Demand Parameter touch on **MAN.** And menu shows as below with **MAN.**(Reset Manually), **AUT_D**(Auto Day), **AUT_M**(Auto Month) options, touch to save the parameter.

Resetting Energy

The Energy counter can be reset for all energies (Including Time zone Wise KWh) recorded. This feature can be used judiciously, as resetting Energy counters reflect in the logged data also and can cause errors in the reports generated. To Reset Energy Data and all other Reset parameters, precede the following instructions.

Touch at Reset Parameter **NO** and it shows menu as shows below for YES or NO selection. Touch on YES to reset Energy or NO to keep as it is.

Resetting Min-Max

This Parameter is used to reset Min – Max Data, Date and Time. GOBLIN-PLUS log minimum and maximum value with date and time for 3 phase to neutral voltage, phase to phase voltage, current, average of phase to neutral voltage, average of the phase to phase voltage, average of current, system frequency, individual and system power parameters. To Reset Min – Max Data touch at **NO** and it shows menu, touch on YES to reset Min-Max or NO to keep as it is.

Resetting Logs

The logged data for all the parameters can be reset to zero. To reset Logs follow steps as above.

Resetting Max Demand

This Parameter is used to reset all Demand data (Including time zone wise Demand). Before resetting Demand GOBLIN-PLUS over write Maximum demand Data on the Last Maximum demand data and then clear all Max demand data. To reset Max Demand follow steps as above.

Resetting Event

The Event logging for all the event parameters can be reset to zeroes. To reset Event Data follow steps as above.

7th Page programming mode Parameters:

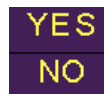

Programming Mode	
Reset Hour	N0
Reset All	N0
Restore Default	N0
Total Time Zone	05
Select TimeZone	01
Select Time(TZ)	12:30

7th Programming Mode Display Page

Resetting Hour

This Parameter is used to reset time of **ON Hour** and **RUN Hour** for **EB (Import & Export)** and **DG**.

Touch at Reset Parameter **NO** and it shows menu as shows below for YES or NO selection. Touch on YES to reset Hour or NO to keep as it is.

Resetting ALL

All the reset parameters mentioned above can be reset to zeroes. To reset ALL follow steps as above.

Restore Defaults

The GOBLIN-PLUS has a feature of which user can restore for all counters to a default values in Programming Mode. To restore defaults follow steps as above. Once reset, the user has to re-program all parameters again.

Setting Total Time Zone

GOBLIN-PLUS have feature of selectable time zone. By default having no (zero) time zone. Selectable from minimum 2 to maximum 5 time zone. Touch at Total Time zone & Enter total number of time zone in between 2 to 5 or 0, press **OK** to save the parameter.

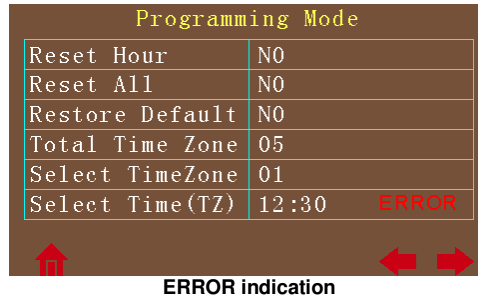

Select Time Zone

To configure time duration of all total number of TZ select particular time zone parameter to set one by one.

Select Time (TZ)

Once, time zone selected then need to configure time for respective time zone. In 7th programming display page shows 12:30 (12 Hour 30 min, Time Format in 24 Hours) of first TZ. To program this parameter first touch on **HOUR** value (12) enter value in 24 hour format press **OK** to save, same as touch on **MIN** value (30) enter value press **OK** to save. Program time in a manner such that all time zone hour are in

ascending order and having gap in between of 1 Hour otherwise it shows **ERROR** message indication for 3 seconds as shows below.

RUN Mode

In the run mode, the various parameters measured & calculated by the meter are displayed on different pages using 480 x 272 (RGB) smart TFT display. GOBLIN-PLUS display pages are in Menu wise selection.

In the Run Mode for 3P4W installation mode main menu display page as below,

Run Mode Display Pages

Measurement Section

To enter into this section touch the measurement icon  on the main menu and display such as below pages. In Measurement section display pages touch on HOME key Icon  to jump to main menu display page. To navigate different measurement pages touch  to move backward or touch  to move forward pages.

3P4W	R-Phase	Y-Phase	B-Phase
VOLTS	240.3	241.3	241.3
AMPS	300.1	200.4	104.2
KW	241.3	56.1	45.1
KVA	0.5	54.4	456.1
KVAR	336.5	24.1	89.4

In 3P4W this shows Phase wise voltage (Phase to neutral), current, KW, KVA, KVAR with phase wise color information.

In 3P4W installation mode if SYSKVA Reading is more than 9999.0 and selected PT ratio greater than 10, then individual KW Reading converted into MW (Mega), KVA Reading converted into MVA (Mega), KVAR Reading converted into MVAR (Mega), by dividing 1000 and this will be indicated by “**MW**”, “**MVA**”, and “**MVAR**” on the display. If SYSKVA Reading again below the 9999.0 Value then GOBLIN-PLUS automatic convert all parameters into “Kilo” Form.

In case, PT ratio >10.0, Phase to Neutral voltage (VOLTS) readings will be converted to KV by dividing 1000 and it’s indicated by KV on the display page.

3P3W	R-Phase	Y-Phase	B-Phase
VOLTS	415.4	-	415.1
AMPS	300.1	200.4	104.2
KW	241.3	-	45.1
KVAR	336.5	-	89.4

In 3P3W this shows Phase to Phase voltage, Phase wise current, KW, KVAR with phase wise color information.

In 3P3W installation mode if SYSKVA Reading is more than 9999.0 and selected PT ratio greater than 10, then individual KW Reading converted into MW (Mega), KVAR Reading converted into MVAR (Mega), by dividing 1000 and this will be indicated by “**MW**” and “**MVAR**” on the display. If SYSKVA Reading again below the 9999.0 Value then GOBLIN-PLUS automatic convert all parameters into “Kilo” Form.

Volts	240.3	KV
Amps	300.1	A
DSP-PF	-0.999	-
DST-PF	-0.999	-
V THD	3.0	%
I THD	46.1	%

In 1P2W this page shows Voltage, Current, Displacement PF, Distortion PF, VTHD (%), ITHD (%) of R Phase. In case, PT ratio >10.0, Phase to Neutral voltage

(VOLTS) readings will be converted to KV by dividing 1000 and it's indicated by KV on the display page.

3P4W	R-Phase	Y-Phase	B-Phase
PF	-0.599	-0.999	-0.999
DSP-PF	-0.999	-0.999	-0.999
DST-PF	-0.999	-0.999	-0.999
VTHD (%)	3.1	3.0	2.9
ITHD (%)	46.1	20.1	30.0

In 3P4W this page shows Phase wise PF, Phase wise Displacement PF, Phase wise Distortion PF, Phase wise Voltage THD (%), Phase wise Current THD (%).

This Page will be not available in the 3P3W and 1P2W installation.

Sys KW	10.6
Sys KVA	75.6
Sys KVAR	265.3
Sys PF	-0.999
FREQ.	50.01

If SYSKVA Reading is more than 9999.0 and selected PT ratio greater than 10, then all system power value converted into M (Mega), KW reading converted into MW, KVAR Reading converted into MVAR, by dividing 1000 and this will be indicated by “**MW**” and “**MVAR**” on the display. If SYSKVA Reading again below the 9999.0 Value then GOBLIN-PLUS automatic convert all parameters into “Kilo” Form.

	VPP		AVERAGE
Vry	415.4 KV	Vpp	415.6
Vyb	415.1 V	Vpn	203.1
Vbr	416.7 KV	Amp	107.4
In :	301.5		

In 3P4W this page shows Phase to Phase voltage, Average Phase to Phase Voltage, Average Phase to Neutral Voltage, Average current and Neutral Current.

In case, PT ratio > 10.0, Phase to Phase voltage readings will be converted to KV by dividing 1000 and it's indicated by KV on the display page.

This Page will be not available in the 3P3W and 1P2W installation mode.

AVERAGE		U
Vpp	415.6	KV
Amp	107.4	A

In 3P3W this page shows Average Phase to Phase Voltage and Average current.

In case, PT ratio >10.0, Phase to Phase voltage readings will be converted to KV by dividing 1000 and it's indicated by KV on the display page.

This Page will be not available in the 3P4W and 1P2W installation mode.

UNBAL [%]					
VR	15.1	IR	0.9		
VY	0.0	IY	7.1		
VB	67.1	IB	0.0		

In 3P4W this page shows Phase to Neutral Voltage Unbalance Percentage and Amps Unbalance Percentage. Voltage Unbalance Percentage is with respect to maximum Voltage and Amp Unbalance Percentage is with respect to maximum current.

This Page will be not available in the 3P3W and 1P2W installation mode.

3P3W	THD [%]	UNBAL [%]
Vry	3.0	0.5
Vyb	3.1	0.0
Ir	46.1	0.9
Iy	20.1	2.0
Ib	30.0	0.0

In 3P3W this page shows total Harmonics Distortions for phase to phase voltage VRY, VYB and current in R-Y-B phases with percentage form. This page also displays Phase to Phase voltage & R-Y-B phases current unbalance percentage.

This Page will be not available in the 3P4W and 1P2W installation mode.

RELAY1	AVG. Amps (120) 135	●
RELAY2	AVG. Amps Demand (80) 50	○
RELAY3	KVA (110) 100	○
RELAY4	KW Demand (90) 120	●

This display page shows relay status with its selected parameter for which alarm has to be generated. Value displayed in bracket indicates the value programmed for assigned parameter. Value displayed without bracket indicates run time value of assigned parameter.

Relay 1 and 4 which shows solid circle is ON. Relay 2 and 3 which shows as an empty circle are OFF. It also indicates assigned parameter of each relays. Value displayed in bracket indicates set values in programming mode. Value displayed without bracket indicates run time value of assigned parameter.

Date	31 / 12 / 2019
Time	23 : 59 : 59
ON Hour	99999 : 59 : 59
LOGS	5 N
TEMP.	57.1 C

The page shows Real Date and Time, ON Hour, Number of Logs & Temperature in Degree Centigrade.

```

R Phase : Import
Y Phase : Export
B Phase : Import
System  : Import
    
```

The page shows phase wise Import or Export status.
This Page will be not available in the 3P3W installation mode.

Histogram Section

To enter into this section touch the Histogram icon  on the main menu and display such as below pages. In Histogram section display pages touch on HOME key icon  to jump to main menu display page. To navigate different Histogram pages touch  to move backward or touch  to move forward pages.

VR - HARMONICS [%]					
3rd	0.0	13th	0.0	23rd	0.0
5th	0.0	15th	0.0	25th	0.0
7th	0.0	17th	0.0	27th	0.0
9th	0.0	19th	0.0	29th	0.0
11th	0.0	21st	0.0		

This page shows R phase voltage Odd Harmonics from 3rd to 29th in percentage form. In 3P3W mode, this page shows VRY voltage odd harmonics.

IR - HARMONICS [%]					
3rd	0.0	13th	0.0	23rd	0.0
5th	0.0	15th	0.0	25th	0.0
7th	0.0	17th	0.0	27th	0.0
9th	0.0	19th	0.0	29th	0.0
11th	0.0	21st	0.0		

This page shows R phase current odd harmonics from 3rd to 29th in percentage form.

VY - HARMONICS [%]					
3rd	0.0	13th	0.0	23rd	0.0
5th	0.0	15th	0.0	25th	0.0
7th	0.0	17th	0.0	27th	0.0
9th	0.0	19th	0.0	29th	0.0
11th	0.0	21st	0.0		

This page shows Y phase voltage odd harmonics from 3rd to 29th in percentage form. In the 1P2W and 3P3W installation this page not available.

IY - HARMONICS [%]			
3rd	0.0	13th	0.0
5th	0.0	15th	0.0
7th	0.0	17th	0.0
9th	0.0	19th	0.0
11th	0.0	21st	0.0
23rd	0.0	25th	0.0
		27th	0.0
		29th	0.0

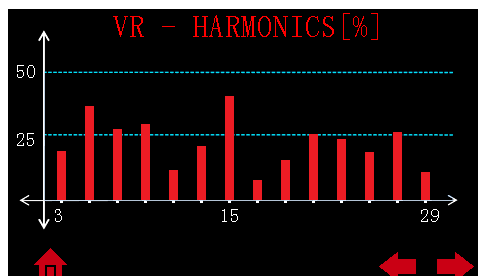

This page shows Y phase current odd harmonics from 3rd to 29th in percentage form. In the 1P2W installation this page not available.

VB - HARMONICS [%]			
3rd	0.0	13th	0.0
5th	0.0	15th	0.0
7th	0.0	17th	0.0
9th	0.0	19th	0.0
11th	0.0	21st	0.0
23rd	0.0	25th	0.0
		27th	0.0
		29th	0.0

This page shows B phase voltage odd harmonics from 3rd to 29th in percentage form. In 3P3W mode, this page shows VYB voltage odd harmonics. In the 1P2W installation this page not available.

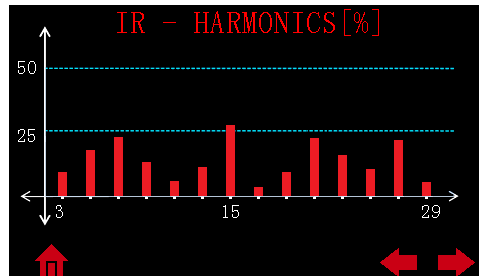

IB - HARMONICS [%]			
3rd	0.0	13th	0.0
5th	0.0	15th	0.0
7th	0.0	17th	0.0
9th	0.0	19th	0.0
11th	0.0	21st	0.0
23rd	0.0	25th	0.0
		27th	0.0
		29th	0.0

This page shows B phase current odd harmonics from 3rd to 29th in percentage form. In the 1P2W installation this page not available.

This page shows R-phase voltage Odd Harmonics Histogram in percentage form.

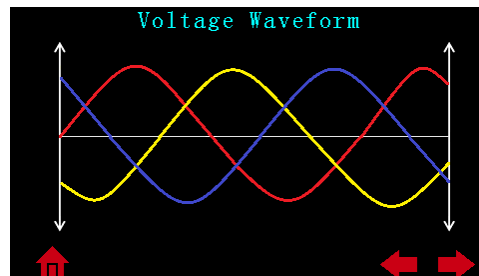

Likewise, Odd Harmonics Histogram for Y-phase and B-phase voltages will also be shown on next pages respectively.

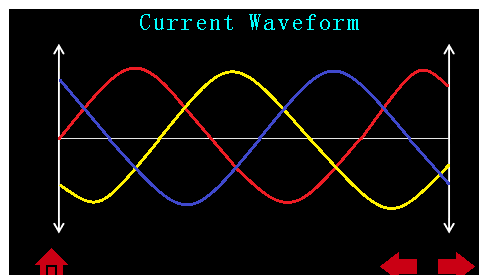

This page shows R-phase current Odd Harmonics Histogram in percentage form. Likewise, Odd Harmonics Histogram for Y-phase and B-phase current will also be shown on next pages respectively.

Waveform Section

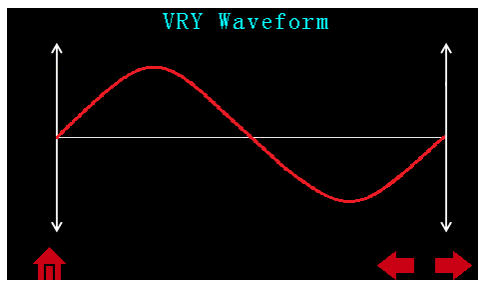

To enter into this section touch the Waveform icon  on the main menu and display such as below pages. Here user can see if harmonic distortion is occurring in the waveform due to non-linear loads like rectifier and UPS etc. In Waveform section display pages touch on HOME key Icon  to jump to main menu display page. To navigate different Waveform pages touch  to move backward or touch  to move forward pages.

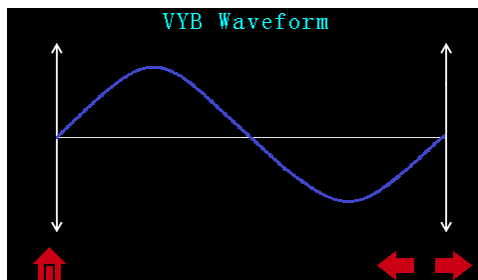

This page shows the waveform for R, Y and B phase voltage in 3P4W. In 3P3W and 1P2W installation this page not available.

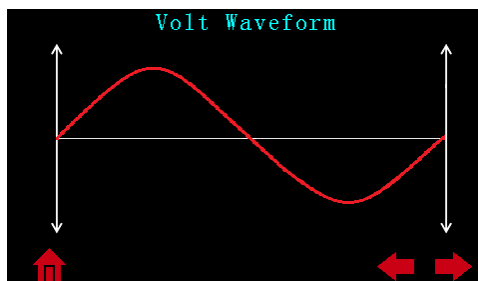

This page shows the waveform for R, Y and B phase current in 3P4W.
In 3P3W and 1P2W installation this page not available.

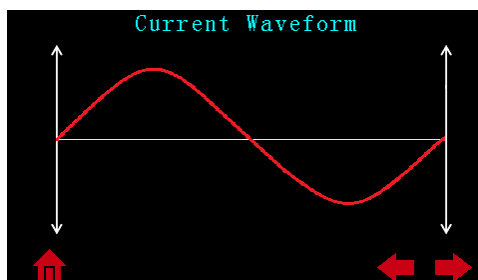

This page shows the waveform for phase to phase voltage VRY in 3P3W.
In 3P4W and 1P2W installation this page not available.

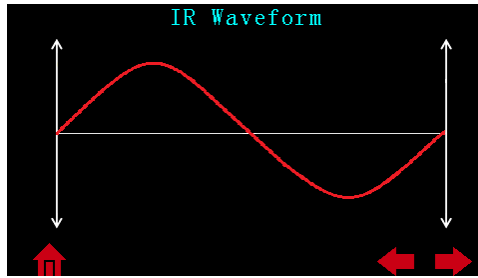

This page shows the waveform for phase to phase voltage VYB in 3P3W.
In 3P4W and 1P2W installation this page not available.

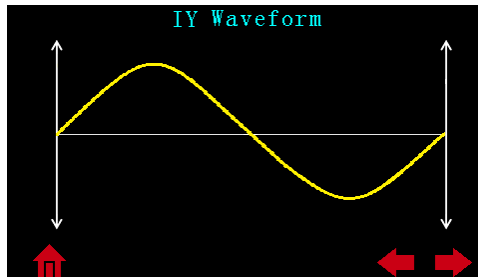

This page shows the waveform for only R-Phase Voltage in 1P2W.
In 3P4W and 3P3W installation this page not available.

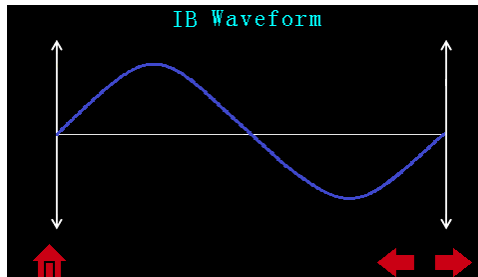

This page shows the waveform for only R-Phase Current in 1P2W.
In 3P4W and 3P3W installation this page not available.

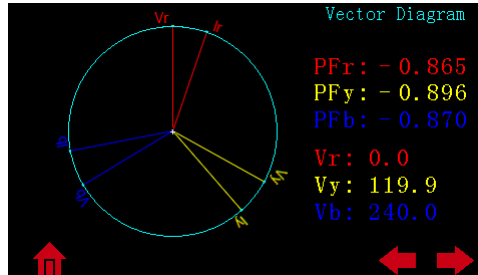

This page shows the waveform for only R-Phase Current in 3P3W.
In 3P4W and 1P2W installation this page not available.

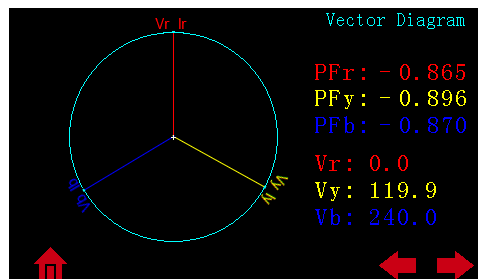

This page shows the waveform for only Y-Phase Current in 3P3W.
In 3P4W and 1P2W installation this page not available.

This page shows the waveform for only B-Phase Current in 3P3W
In 3P4W and 1P2W installation this page not available.

This page shows the Vector diagram circle of all three phases voltage & current, also having phase angle of voltages VR, VY, VB and Power factor of R, Y and B phase. This Page will be not available in the 3P3W and 1P2W installation mode. In this page touching in the center of the circle shows all phase voltage & current are in phase or not. As shown in below image.

Again touching at center will update the vector circle in real time.

Energy Section

To enter into this section touch the Energy icon  on the main menu and display such as below pages. In Energy section display pages touch on HOME key Icon  to jump to main menu display page. To navigate different Energy pages touch  to move backward or touch  to move forward pages.

EB KWh	5689.6	IMP ↓
EB KVAh	4759.2	
EB KVARh	1456.2	LG
	6235.4	LD
EB Time	10 : 02 : 59	

This page shows System KWh, KVAh, KVARh Lag &Lead, run hour time for EB in Import condition. Down arrow with **IMP** shows import condition.

EB KWh	4536.2	EXP ↑
EB KVAh	1245.6	
EB KVARh	893.2	LG
	15.3	LD
EB Time	03 : 45 : 26	

This page shows System KWh, KVAh, KVARh Lag, KVARh Lead and run hour time for EB in Export condition. Up arrow with **EXP** shows Export condition.

DG KWh	145.6	
DG KVAh	140.8	
DG KVARh	26.8	LG
	1.5	LD
DG Time	00 : 15 : 42	

This page shows System KWh, KVAh, KVARh Lag, KVARh Lead and run hour time for DG. There is no import/export split while load on DG.

Demand/Timezone Selection

To enter into this section touch the Demand/Timezone icon  on the main menu.

If selected total number of timezone is zero than display page having only one option to select is demand.

Demand Page

If selected total number of timezone is two or more than display page having two options to select is demand & timezone.

Touch on HOME key Icon  to jump to main menu display page.

Demand Section

To enter into this section touch on Demand and display such as below pages

In Demand section display pages touch on HOME key Icon  to jump to Demand or Timezone selection display page as shown above. To navigate different Demand pages touch  to move backward or touch  to move forward pages.

Demand as Import or export selection, need to touch on **IMP** or **EXP** button.

- If touch on **IMP** import KW demand data will display. **IMP** Highlights with white background and **EXP** highlights with black background.
- If touch on **EXP** export KW demand data will display. **EXP** Highlights with white background and **IMP** highlights with black background.

Export KW Demand - Sliding Demand Type

This page shows KW demand data; **KW PRS** - present KW demand, **KW MD** - Maximum KW demand with Date and Time, **LMD KW** - Last Maximum KW demand

with Date and Time. **PRD** - Predicated demand only display when selected Fix demand with 15 or 30 minute window.

Likewise, KVA and KVAR Demand pages will also be shown on next pages respectively having same Import, Export (**IMP** or **EXP**) touch button functionality.

This page shows Average AMPS demand data; **IAVG PRS** - present IAVG demand, **IAVG MD** - Maximum IAVG demand with Date and Time, **LMD IAVG** - Last Maximum IAVG demand with Date and Time. **PRD** - Predicated demand only display when selected Fix demand with 15 or 30 minute window.

Import & export (**IMP** or **EXP**) selection functionality not available in Average AMPS demand page.

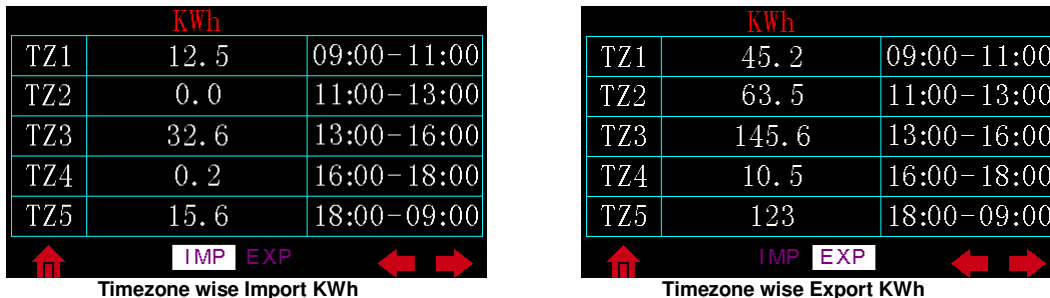

Timezone Section

To enter into this section touch on Timezone (if total number of timezone is two or more) and display such as below pages.

In Timezone section display pages touch on HOME key Icon to jump to Demand or Timezone selection display page as shown above. To navigate different Timezone pages touch to move backward or touch to move forward pages.

This page shows timezone wise KWh with programmed Hour and Minute details.

Also having functionality to choose Import or Export Timezone KWh. If touch on **IMP** then timezone wise import KWh data will display & if touch on **EXP** then timezone wise export KWh data will display.

In above display page selected total number of timezone is five so TZ1 to TZ5 KWh data updated with hour and min, if selected total number of timezone is three then only TZ1 to TZ3 KWh data will update.

Timezone 1 Export KVA Demand data

This page shows timezone wise **KVA DM** - KVA demand, **KVA MD** - Maximum KVA demand with date & time, **LMD KVA** – Last Maximum KVA demand with date & time. If touch on **IMP** then timezone wise import KVA demand data will display & if touch on **EXP** then timezone wise export KVA demand data will display. Selection of timezone number is same as above explained in Timezone wise KW demand page.

Communication

RS485 CONNECTION

In addition to the industrial standard RS-485 communication port, other communication options: USB 2.0 and pen drive for downloading of logged data are also available in GOBLIN-PLUS. This option makes it possible for a user to select GOBLIN-PLUS to provide power and energy information into a variety of existing or new control systems. Each communication option supports data transfer with external devices or applications. Metering measurement, logged data, configuration and status data may be accessed via communication.

Modbus RTU on RS485 Port

In order to monitor live data for the various system parameters, user can use RS485 connecting to SCADA or EMS software. GOBLIN-PLUS supports a two wire RS485 port with MODBUS-RTU protocol. The station ID for each meter is site selectable. The data which can be read using MODBUS query # 3 (Read Holding Registers) is provided in an address map, with the applicable multiplication factors, vide **Appendix**.

Communication line parameters: 9600 or 19200 or 38400/8/N/1.

The register map is described in Appendix. All addresses are in decimal. If illegal address is sent in the query or the host tries to read more than 254 bytes of data in one query, exception message is generated. The parameters name, address, Data format and multiplication factor are mentioned in **Appendix**.

Data Logging using USB Port & Pen Drive

GOBLIN-PLUS has a 16 MB non-volatile memory. This memory is used to store the minimum and maximum values of important parameters, events as defined by the user and the snapshot of the entire electrical system where all instantaneous and integrated parameters along with Harmonic data are saved. Maximum numbers of such electrical snapshots are 35172.

While the electrical snapshots as saved in the logs can give a good idea of the overall behavior of the system, the Event Log feature captures time-stamped records of important power system occurrences that can be aligned with corresponding production effects to better understand and optimize energy use and cost.

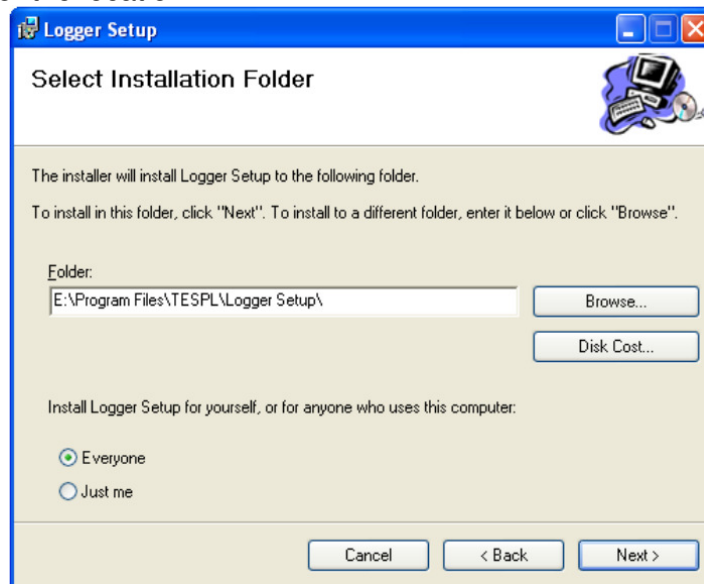

One can monitor values over a day, a week, a month or any period to record the

highest and lowest values of voltage, current, power factor including Event parameters.

GOBLIN-PLUS supports USB 2.0 and Pen Drive for downloading of logged data. For USB, users are provided a CD for USB utility installation along with the purchase of GOBLIN-PLUS. Before installing the software, users are advised to read carefully Read Me document in Logger disc for a list of minimum system requirements to be installed, if uninstalled before. If your system does not meet the minimum system requirements, installation of GOBLIN-PLUS software will not be possible.

Installing the USB Software

1. Insert the Logger setup CD into the CD-ROM drive of your computer after windows is started.
2. Double click on the Logger and select Logger Setup or Setup and then, double click on any of the setup. Wizard welcomes for Logger Setup. To precede the installation, click Next and then, the wizard will show the following dialog box for the location.

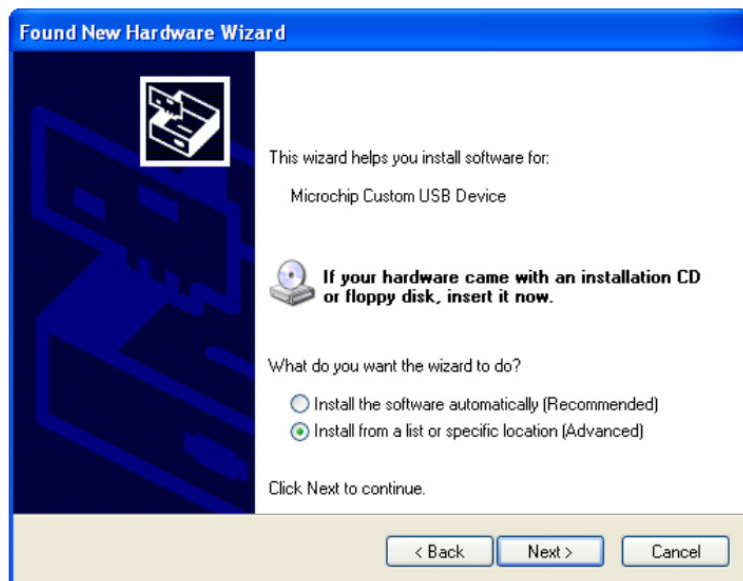

3. Before selecting the location, user can also check the disk space for each drive clicking Disk Cost. The Logger Setup has also two options such as everyone and just me of which everyone is selected by default.
4. To confirm the installation, click next in the next wizard and wait for some time while preceding the installation. After completing the installation, the wizard will display the Logger Setup has been installed successfully. Now click Close to exit the wizard.

Installing the USB Driver

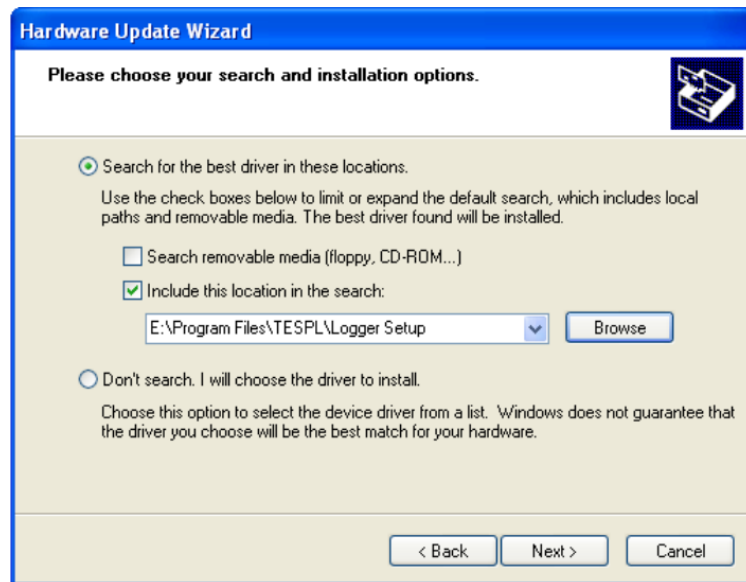

Make sure that the USB cable is connected in between the PC and unit. If the USB connection is not all right, remove the USB cable and connect again. If the USB is connected for the first time, the wizard will show with following option.

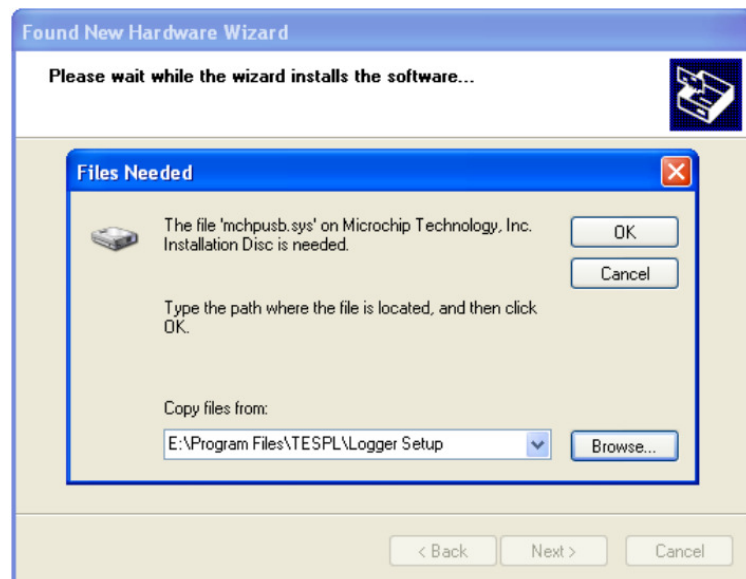

Select the option, Yes, This time only and click next to proceed for the next wizard such as shown below.

The wizard will ask if your hardware comes with an installation CD or floppy disk, insert it now. Select the wizard option, Installation from a list or specific location and click Next to give the following dialog box where the file is located.

In the above dialog box, select option Search for the best drive in this location and click check box of Include this location in the search to specify path of usb drivers and then, click Next to get the path where the file is located.

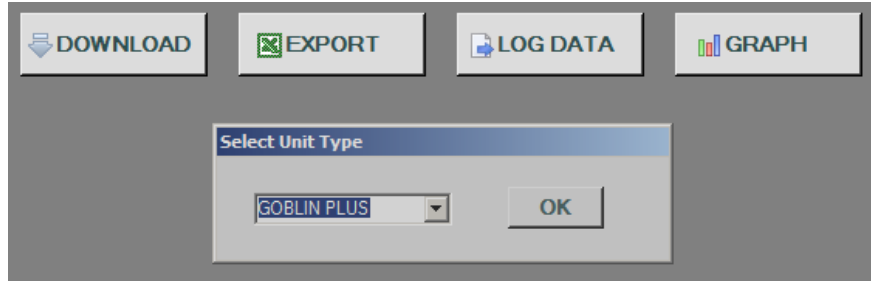

5. Now click OK, to complete the wizard.
6. Wait for sometimes while completing the wizard and then the wizard will prompt the new hardware gets completed. Now click Finish to complete the installation.

Handling the Logger Window

The Logger window consists of the following: Downloading logged data, harmonic data, and Graph representation onto Logger window and Exporting the Logged data in to a excel sheet.

Downloading the Logged data

1. By default the utility will show Logger (including version numbers) on desktop. Double-click on the Logger icon. Now the Logger will open with the following window.

2. In the unit type list, select the GOBLIN-PLUS and click OK and to start downloading, click DOWNLOAD and then, the logged data will open with the following logger window.

Graph Representation

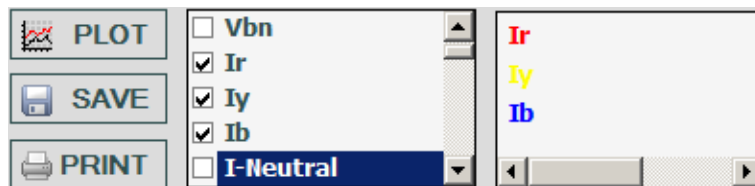

The graph plots for various selected parameters of Logged data including harmonics distortion along with date and time. Hence, the back ground color, Axis colors and Label colors can also be selectable.

Plotting a Graph for Logged Data

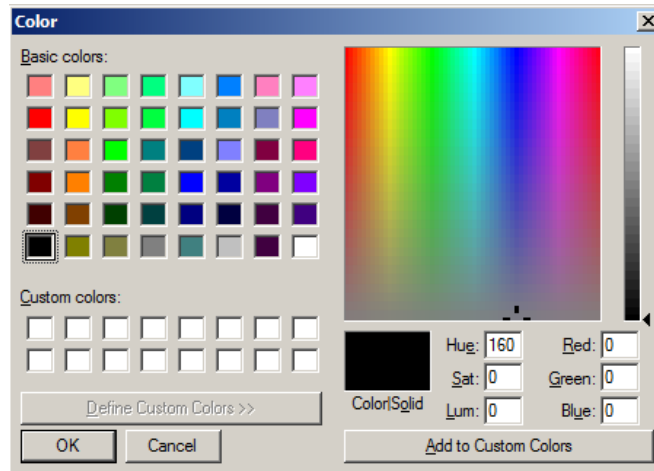

The logged data can be plotted to a graph with the selected parameters, date and time.

To plot a graph, proceed the following instructions,

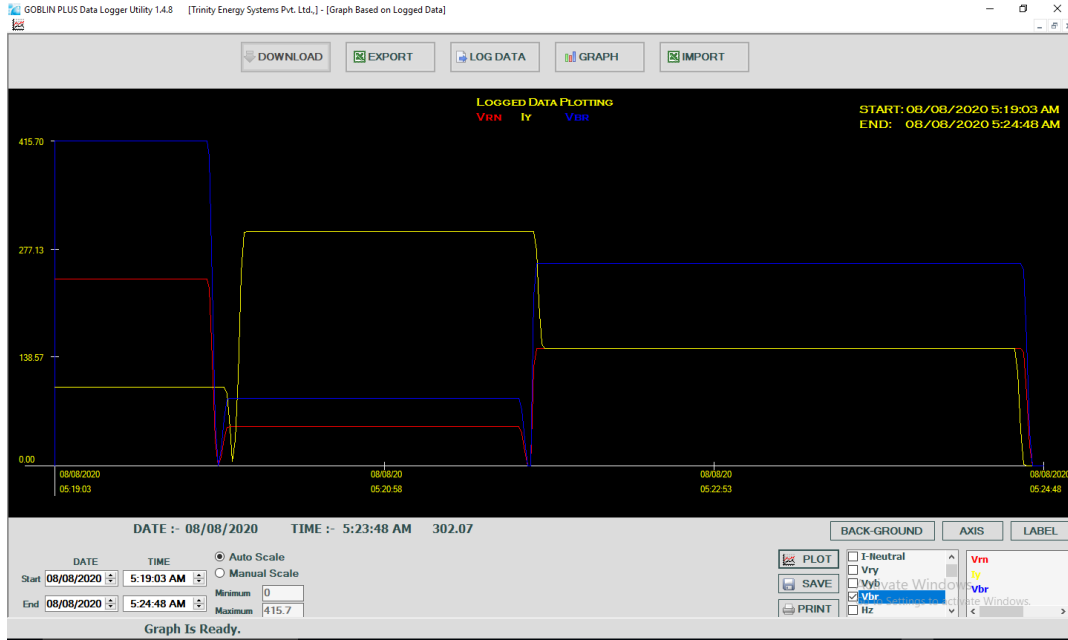

1. At the top of the Logger Windows, click Graph to show a graph window.
2. At the bottom of the graph window, enter starting date and time in the Start box, enter ending date and time in End box under Date and Time. There are also two types of Scale such as Auto scale and Manual scale. Auto scale is already selected by default. For Manual scale requirement, select Manual scale.
3. To select for the parameters to be plotted, double-click in check box which will display the parameter selected at right side list with colors such as shown below.

4. If the parameters selected are not desired, double-click again in the check box to remove the selected parameter from the list.
5. To change the color of the selected parameters displayed at right side list (e.g. Ir, Iy, Ib and KW) double-click on it, and then the color palette will show such as below.

6. Select the desired color and click Ok. Now, the selected parameter will plot with the selected color. Similarly, each selected parameter can also be plotted. Before plotting the parameters, the background color, axis color and label color should be specified by clicking **BACK-GROUND**, **AXIS** and **LABEL** so as to represent along with the selected colors.
7. Now, click **PLOT** to plot a graph for the selected parameters such as shown below.

8. The plotted graphs can be saved and printed clicking  and  respectively. Hence, to return into previous Logger Windows, click .

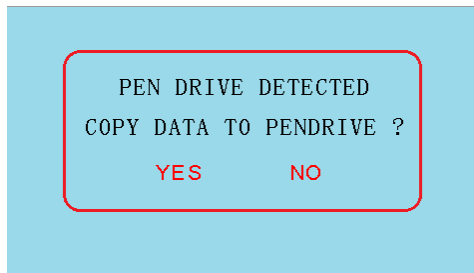

Data Download Using a Pen Drive.

The unit supports pen drive for downloading logged data. The data exported as before into an excel sheet using a USB 2.0 can also be downloaded using a pen drive. Make sure your USB cable is disconnected.

Simultaneously, both USB and PEN DRIVE should not be used. First used port will keep on connecting only. The second port will not be responded because the unit does not support both the ports simultaneously. Please don't use extension cable with pendrive.

To download data into a pen drive, follow the instructions:

1. Insert your pen drive into Pen-drive port provided at the top of the unit. Make sure your USB cable is disconnected. The unit will prompt a message on display such as shown below.

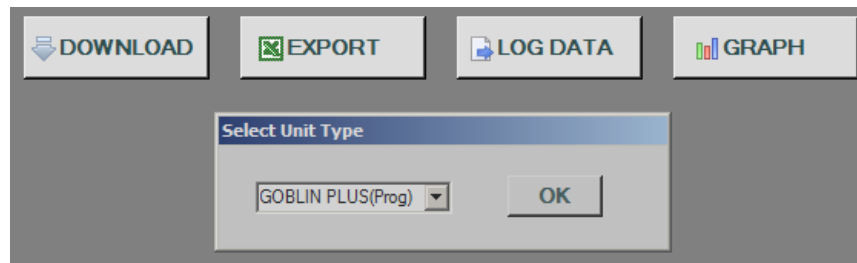

2. Touch YES to start downloading. The unit will prompt a message “Downloading in pen drive” Wait for sometimes and download completely. It may take sometimes depending on the size of the logged data. If log has been recorded up to maximum 35172, it will take about 3 minutes. Touch NO to not precede USB data downloading process and display page appear where PEN drive inserted (Normal RUN mode display page appear).
3. After completing download, insert your pen drive into a pc and click G-ddmmy (GOBLIN PLUS-date,month,year) folder and then click G-hhmmss (GOBLIN PLUS-hour,minute,second) folder, this folder having two files – one is installation name Data logging file (in case of 3P4W installation mode – 3P4W.XLS, in 3P3W installation mode – 3P3W.XLS, in 1P2W installation mode – 1P2W.XLS) and second is min-max (MIN-MAX.XLS) data file. It mentions date and time of data downloading according to RTC of the unit.
4. Now the excel sheet will open as previous excel sheet of data downloading using USB cable.

Programming Mode Using Utility

All the users’ programmable parameters in Programming Mode of unit can also be programmed using Logger Utility. Using utility, user can easily specify for all the programmable parameters which is also more convenient than the programming in unit. Make sure USB cable coming from the PC is connected to GOBLIN-PLUS where the USB port is provided at the top of the unit.

To configure the Programming Mode using Logger utility, precede the following instructions, Double-click on the Logger icon as before. Now the Logger will open with the following window.

Select GOBLIN PLUS (Prog) in list box and click OK that will open the page such as shown below.

The screenshot displays the GOBLIN PLUS configuration menu. It is organized into several sections:

- Installation:** Radio buttons for 3P4W, 3P3W, and 1P2W. An APPLY button is present.
- RS-485:** Radio buttons for 9600 and 19200 baud rates, and 38400 UNIT ID. An APPLY button is present.
- CT-Ratio:** Input fields for mPRIMARY (5000), mSECONDARY (1), nPRIMARY (5000), and nSECONDARY (1). An APPLY button is present.
- PT-Ratio:** Input fields for PRIMARY (110) and SECONDARY (110). An APPLY button is present.
- Date & Time:** Digital input fields for DD, MM, YY, HH, MM, SS. A checkbox for 'System' and an APPLY button are also present.
- LOG Duration:** Input field for MINUTE (1) and an APPLY button.
- Relay:** A dropdown for RELAY No. (1), a dropdown for PARAMETER (Volts), and input fields for VALUE (5000), HYSTERESIS (05%), and DELAY (5). An APPLY button is present.
- Event:** A dropdown for EVENT No. (1), a dropdown for PARAMETER (Volts), and input fields for VALUE (5000), HYSTERESIS (05%), and DELAY (5). An APPLY button is present.
- Demand:** A dropdown for WINDOW (Sliding-15) and a dropdown for RESET (Manual). An APPLY button is present.
- Time Zone:** A table for TZ-1 to TZ-5 with columns for HH, MM, and RELAY. A Total TZ input field is set to 1. An APPLY button is present.
- BACKLIGHT TIME:** Input field for 110 and an APPLY button.
- Verify Password:** Four empty input boxes and an APPLY button.
- Power Quality:** Input fields for Nominal Voltage (110), SAG % (110), SWELL % (110), INTERRUPTION % (110), and HYSTERESIS % (110). An APPLY button is present.
- RESETS:** Radio buttons for Reset Energy, Reset Min/Max, Reset Logs, Reset MaxDemand, Reset Events, Reset Run Hour, and Reset ALL. An APPLY button is present.

At the bottom right, there are three large buttons: APPLY ALL, READ ALL, and RESET METER.

By default the cursor blinks on Verify Password box where the user need to enter same password as the meter have. Click **APPLY** to enter into Programming Mode. After configuring each programmable parameter, click **APPLY** to confirm the setting. If user selects Installation type and CT Ratio, the unit may restart. User will wait till the unit enters into Run Mode and then user will again enter password. In case, a message displays “Error in USB Communication” click OK and try again so that all the programmable parameter can be configured.

Control Outputs

The relay contacts provided in GOBLIN-PLUS are rated for 3A @ 230VAC. They are also protected by snubbers against fast voltage transients which occur when inductive loads are switched off. Thus, the following points are to be taken care of when using these relay contacts:

1. Use 230VAC coils only in the contactors. DO NOT use 440V AC coils.
2. DO NOT switch small loads like electronic Hooters, small relays with 240V AC coils etc. directly from the relay contact of GOBLIN-PLUS. If done so, the small leakage current from the snubbers will not allow these loads to be switched off fully. Thus, the electronic hooters will give a low hum continuously, and the small relays will switch on but not switch off. Use these relay contacts to switch an Auxiliary contactor and put the load on the contactor contacts.

GOBLIN-PLUS as a Load Manager / Demand Management

Each relay can be programmed separately to generate alarm on a specific parameter with its specific value. The value at which it should open is also programmable. Thus, user could have the first relay programmed to close when the

avg. Voltage exceeds certain value, second when the Avg. Amps exceeds some level, third for KW, or KVAR or PF or Demand and so on.

This allows the user to deploy GOBLIN-PLUS as a true LOAD manager, to generate alarm / trip signals for four different conditions!

ENERGY PARAMETER READING

- For Reading Energy Parameter, user needs to combine KxH1 and KxH2 Parameters. e.g For calculating KWh Import Energy user need to read KWH1 – Import and KWH2 – Import Parameters and then combine its.
 - KWH1 IMPORT(at 265 Address) = 98
 - KWH2 IMPORT(at 267 Address) = 548,632,510
 - SysKWh : ((KWH1IMPORT*10,000,000)+(KWH2 IMPORT/100))
 $((98*10,000,000)+(548,632,510/100)) = 985,486,325.1$

- For Reading Net Energy Parameter, user needs to combine Net KxH1, Net KxH2 and NET KxH-SIGN MULTIPLIER Parameters.e.g. For calculating Net KWh Energy user need to read Net KWH1, Net KWH2 and Net KWh sign multiplier.GOBLIN-PLUS send +1 or -1 as sign multiplier.
 - NET KWH1(at 273 Address) = 85
 - NET KWH2(at 275 Address) = 456,823,105
 - NET KWH –SIGN MULTIPLIER(at 277 Address) = (-1)
 - Net KWh :
 $(\text{SIGN MULTIPLIER}) * ((\text{NET KWH1} * 10,000,000) + (\text{NET KWH2} / 100))$
 $(-1) * ((85 * 10,000,000) + (456,823,105 / 100))$
 : -8,545,682,310.5

x – W,VA and VAR.

DEFINING MULTIPLICATION FACTOR

- Hz has a multiplication factor of 100.e.g. If Hz is 48.33, then it is sent as 4833 for providing resolution. In same fashion PF has a MF of 1000. Thus, a PF value of 0.987 is sent as 987.
- If an attempt is made to read some address other than the valid addresses, the exception response is sent.

EXPEPTION CODE

In the event that the query from the HOST has no communication error, but there is some error in specifying the address of registers to be read, the meter returns an exception message. The format of the exception message will be as under:

Unit Address	0X83	Exception code	CRC	CRC
--------------	------	----------------	-----	-----

Exception Code can have only one value, 02: if the address is not a valid, start address or host has requested more than 254 bytes of data, this code is returned.
